

At the end of the application, kindly add the following:

MODULAR PANELS FOR MAKING A SWIMMING POOL

ABSTRACT OF THE DISCLOSURE

Panels for making a swimming pool have a globally rectangular planar prefabricated structure delimited by a peripheral frame consisting of vertical and horizontal wings, one of the vertical wings having, suitably distributed over its height, fixing arrangements adapted to co-operate with matching arrangements of the other vertical wing of an adjacent panel. The matching arrangements are selected to enable the panels to be automatically assembled after said arrangements have been engaged under a pressure force exerted in a plane parallel to the vertical wings and to ensure tightness in combination with a profiled shape arranged over the whole length of the vertical wings at their connecting portion with the planar surface of the structure.
